

ABSTRACT OF THE DISCLOSURE

A motor vehicle (01) has a device for recognizing the current status of a traffic signal (03), a control unit (06) in which the output signal of the device can be processed, and a signaling device (07, 16). The signaling device (07, 16) is arranged in the motor vehicle (01) and is able to signal the current status of the traffic signal (03) to the driver in an optically and/or acoustically and/or haptically perceivable fashion.
